

## Automated FLOWRx Hub

*Accessible, affordable and scalable hub and spoke solutions*

Our fully automated FLOWRx Hub technology has been designed for pharmacies that dispense a large number of original packs.

The solution labels, sorts, bags and totes medication packs for patient prescriptions accurately and at speed.

The FLOWRx Automated Labeller (ALU) automatically affixes labels to packs. The packs are placed onto the conveyor at the induction station. They are scanned, matched to a patient order and then labelled. After labelling, the packs are sorted into patient specific baskets at the RFID LED Smart Shelves.

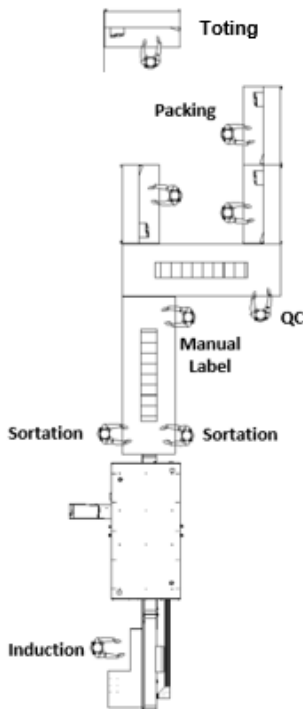

The Automated FLOWRx Hub is modular and scalable, enabling your technology to grow with your operation. As you scale up and increase your volumes we'd then work with you to put in place a double automated hub line which will help you increase capacity and speed up existing processes even further.

## At a glance.....

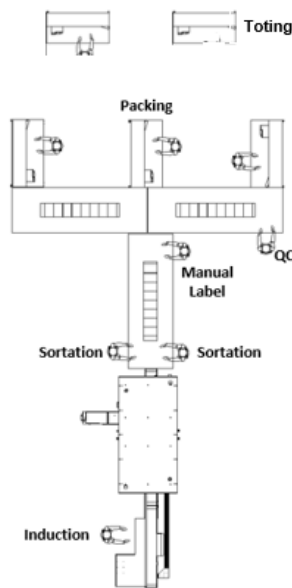

- Hub processing rate of up to **1,500 packs** per hour for a single line with one ACT/Pharmacist and eight FTE
- Hub processing rate of **3,000 packs** per hour for a double line with one ACT/Pharmacist and 17 FTE.
- **Single Automated FLOWRx Hub:** Servicing somewhere between 17 and 35 stores and processing 8,000 items per month with an 80/20% split for repeat prescriptions and walk-ins.
- **Double Automated FLOWRx Hub:** Servicing over 35 stores and processing 8,000 items per month with an 80/20% split for repeat prescriptions and walk-ins.
